Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	X - Force
Project / Solution Name	SurplusLink AI
Name (Leader)	Preesha Divine Simon
Email & Phone (Leader)	j26046777@student.newinti.edu.my 018-9000665
University Affiliation(s)	INTI International College Subang
Live Prototype URL	https://surpluslink-ai.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/JR7007/surpluslink-ai

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

SurplusLink AI is a single-page web application built with React and Vite. The frontend connects directly to Firebase Authentication for user login/registration and to Cloud Firestore for real-time storage of listings, chats, deals, and audit logs. AI features call Google Gemini API through a lightweight server-side proxy, which keeps the API key off the client. The app is deployed as a single service on Replit, which serves both the built frontend and the backend proxy.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
JavaScript (JSX)	Used to build the UI A language rather than a licensed software package	No license
React 18	UI library used to build the interactive interface	MIT license
Vite 5	Build tool and local development server for the frontend	MIT license
Node.js	JavaScript runtime that powers the backend proxy server	MIT license
Express (backend proxy)	Web framework used to run the server-side Gemini proxy	MIT license
Plain CSS	Styling the application A language	No license

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Google Gemini (gemini-3.8-flash)	listing quick-fill, expiry-date reading, price explanation, buyer match re-ranking, chat summarization, and dispute summarization	Free
Firebase Authentication	email/password login and registration	Free

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Google Firebase's Cloud Firestore	The application database, storing listings, chats, deals, and user profiles	Singapore FreeSpark plan
Replit	To host and deploy the live prototype (both the frontend and the backend proxy)	Replit's free tier

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Google Gemini (gemini-3.8-flash	Google via the Gemini API	Pre-trained	Gemini API

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
None	None	None	None	None

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☐ Yes ☑ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Arena.ai,	comparing AI model responses during early prototyping decisions	Minor
Google Gemini	Used as a development assistant	Moderate
Canva AI	image generation for visual assets	Minor
Claude (Anthropic)	code checking assistance, debugging, Git/GitHub workflow guidance, README drafting, and security architecture advice	Moderate

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

All codes and contents generated through Claude, Gemini, and features in the app by Gemini have been reviewed before using them. During the development process of the app, it has been tested on local devices and all the features such as quick fill, expiry reading, and chat summaries have been checked. Any issues, including outdated references to the model, have been detected and corrected prior to releasing the product. AI is just a supporting tool but the final decision is made by a person. The prices for products are calculated according to the rule-based model.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☐ Yes ☑ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
None	None	None

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Use of Replit was necessary in order to meet the requirements of deployment at the hackathon as it is the place where the version of the application available for testing by the jury can be hosted. But Replit is not a component of the architecture of the app and all it does is running the existing front end (React/Vite) and back end (Express proxy). All functionalities of the prototype, including AI, database and authentication, are not tied up with Replit and will stay the same whatever other hosting platform (Node.js supported) is used.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The text from user-submitted listing and product images can be submitted to the Google Gemini API for processing by AI. The application data (user profiles, listings, chat, deals, audit logs) are stored in the Google Cloud Firestore that is based in Singapore (asia-southeast1). This is a hackathon project and users, including judges, are informed to use fake or sample data only (any email addresses, fake SSM/Business Registration Numbers); no personal or financial data should be inputted. A server-side proxy protects the Gemini API key.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The Owner/Staff/Admin toggle switcher is just a demo control and does not implement any server-side authorization at all. In the demo version, Firestore security rules allow any authenticated user to read/write all documents. That is good enough for a judged demo but not sufficient for any production use. The AI-generated content (price explanation, match ranking, chat dispute summary) is just advisory. The decision on the dispute will be made by an administrator, while the price will be calculated according to the rule-based formula, not by AI. AI-generated reading of photos (expiry date, quick-fill) may not work well with blurry photos.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
